PMS Central Ô
## DATA SHEET

PMS Central software controls the Sony PMS-500 and 400 video transmission products. The software can be used on a standard PC to make it easy to dial sites and control the cameras on those sites. An optional video card will allow the received pictures to be displayed on the PC monitor or captured to the PC hard disk.

Each site will also have a map layout for camera selection making it easy for the operator to know where each camera is on site. This layout appears automatically when an alarm call comes in to the monitoring station giving instant recognition of the site and where the problem is. Key holder and action details are also displayed at this time.

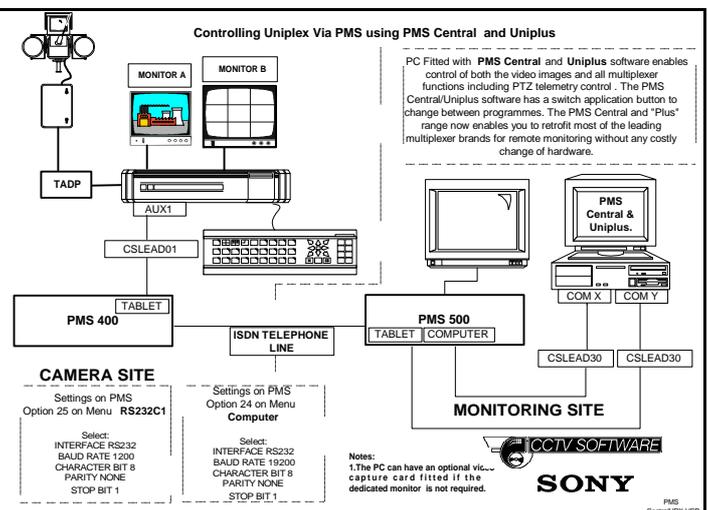

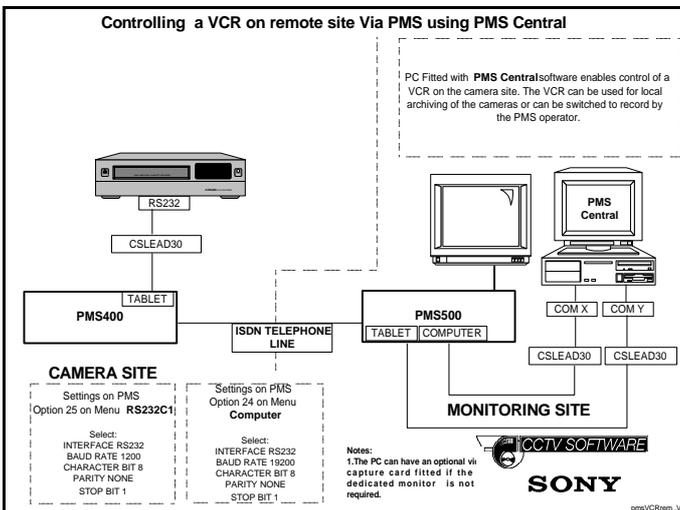

Camera control is enhanced by an on screen joystick or by using and external PC joystick.

PMS Central has sophisticated logging of all operations to a chosen PC. This means that reports show operations from all operators on the network and not just one PC.

Main features are:
♦ Central station control software for PMS - 500 / 400
♦ Map layout display of each site
♦ Optional video picture on PC Monitor
♦ Pan and tilt control with on-screen buttons or PC Joystick
♦ Easy site setup and dialling
♦ Upload / download of all PMS settings and setup.

PMS CENTRAL software can be utilised in English, French, German, Italian, Spanish, Swedish or Finnish

Hardware / Software	Requirements
PC Ram	8 MB or above
PC & Display	Pentium 75Mhz or higher with 256 colour VGA or SVGA. Pentium 166 or higher Recommended
